Stone Artifacts of Texas Indians

REFUGIO

This unstemmed, elongate-triangular point sometimes has a needle-like distal tip. The base is convex and often thinned. Like Kinney and Pandora, it is possible that some, or most, are actually preforms or knives.

Distribution: Reported in south Texas, the central coast and the lower Pecos./Period: Archaic./Sites: Choke Canyon; La Perdida; San Miguel Creek (41AT7); McMullen County

References: Hall, Black and Graves 1982; Weir 1956; Hester 1968; specimens from the Bromley Cooper collection; Suhm and Jelks 1962
